

Surface Water Supply of the United States Volume 11; Pacific Coast in California (Paperback)

By Geological Survey

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: .no flow July 25 to September 16, 1908. Diversions.--Douglas and Enterprise ditches, which have a combined capacity of about 50 second-feet, divert from the Middle and South forks water which is used for power development for domestic supply and irrigation at Plymouth and vicinity. Slug Gulch ditch--capacity of 7 or 8 second-feet--also diverts water from the Middle Fork when prior appropriations permit. Michigan Bar canal, which has a capacity of about 50 second-feet, heads on the main Cosumnes at Musicdale Creek. Record of amount of water diverted not available. Regulation.--Flow partly regulated by diversions. Accuracy.--Stage-discharge relation permanent. Rating curve well defined above 30 second-feet and fairly well defined below; same curve applicable since February 1, 1911. Gage read to hundredths twice daily. Daily discharge ascertained by applying mean daily gage height to rating table. Records excellent, except for low water, for which they are good. The...
